

11 7 8 6 8
 10 6 8 6 8
 10 6 7 5 8
 8 5 6 5 8
 8 5 5 4 8
 8 4 4 4 8

✓

$$mx \leq mn_1 + mn_2$$

$$H_n \leq L_n + \min(L_2, L_3)$$

generalize

$$\forall_i H_i \leq \min(L_{\leftarrow i}) + \min(L_{\rightarrow i})$$

Why is this enough ???

NO! But it's easier than that...

1 2 3 4 5
 1 2 3 4 5
 1 2 3 4 5

1 2 3 4 5
 1 2 3 4 5
 1 2 3 4 5

1 2 3 4 5
 1 2 3 4 5
 1 2 3 4 5

+/+ +/+ +/- +/-
 1 4 7 3 6 2 5

For each index count (L, R) :

just bool # of options to \leftarrow, \rightarrow blocks by numbers needed later!

1 2 3 4 5
 1 2 3 4 5
 1 2 3 4 5

-/- \Rightarrow answer 0
otherwise: 2 $\#(+, +)$

1 2 3 4
 0 0 0 0

1 2 4 3
 0 0 0 1

1 3 2 4
 0 0 1 0

1 3 4 2
 0 0 1 1

1 4 2 3
 0 1 0 0

but 10 numbers modified!
